- Create beautiful and production-efficient embroidery
- Special effects with stitches and advanced features
- Import vector files (e.g. ai or eps) for stitching

Product description

Tajima Software ILLUSTRATOR EXTREME

Embroidery software for professional design creation

Illustrator Extreme offers multiple ways to create design cards, from traditional punching tools to advanced methods for creating high-quality embroidery designs. Special effects with stitches and advanced features give you all the tools you need to efficiently create beautiful and production-efficient embroidery.

Embroidery software for outline editing and digitising

Import your vector files (e.g. ai or eps) for stitching. No quality is lost in the conversion and the original colours are retained. For larger objects consisting of several small segments, these can easily be combined into a single unit. This offers several advantages in terms of handling cuts and necessary transport stitches between sub-segments. Otherwise, these must be planned "manually". Fantastic effects can be created very easily.

A very useful feature allows you to easily copy only part of the shape of an entire object, for example to create a border on only one section of a larger surface.

Description

- Create beautiful and production-efficient embroideries
- Special effects with stitches and advanced features
- Import vector files (e.g. ai or eps) for stitching
- Original colours are retained during conversion
- Multiple small segments can be easily combined into a single unit
