

Product Sheet

Caron Phoenix single-layer cradle

Category: Material handling

Stable and accurate feeding – regardless of material

Caron Phoenix is a stand-alone single-layer cradle that can handle both elastic and stiff fabrics with high precision. It is pre-set, tested upon delivery and ready to use immediately with automatic cutting systems.

- Tested and ready to use
- Versatile material handling
- Automated functions

Product description

Complete solution for precision feeding

Phoenix is Caron's single-layer fabric cradle designed to provide smooth, controlled feeding of material to automatic cutting machines. It handles both non-stretch and stretch fabrics and comes ready to use with no additional installation required. With features such as automatic tipping, edge adjustment, fabric tension control and the option of reverse rotation, Phoenix is an effective aid in both low and high-volume production. The cradle is height-adjustable, fully synchronisable with cutting systems and available in several capacity levels.

Description

- Tested and ready to use – no additional connections required during installation
- Versatile material handling – handles both rigid and elastic fabrics
- Automated functions – such as edge adjustment, fabric tension and tilting

Technical Specification

Machine Specifications

Width	180 / 220 / 250 / 320 cm
Load capacity	80–1000 kg (depending on model)
Roll diameter	up to 60 cm
