Caron Spider Multi-feeder

Category: Material handling

Automated feeding with maximum control

Caron Spider is a patented multi-feeding system that handles up to 6 rolls automatically – without any manual intervention during production. Precision, capacity and full integration in a single system.

- Fully automatic switching between up to 6 rolls
- Integrated cradle for precise feeding to the cutting machine
- Powered by industrial PC and smart software

Product description

Full control in one flow

Caron Spider is an automated feeding system that combines a rotating carousel with an integrated single-layer cradle. The system is designed to handle multiple material rolls in sequence without manual handling. After the operator has loaded the materials needed for a work order, Spider automatically selects, positions and feeds the correct roll with high precision. It is equipped with an industrial PC and intuitive software for scheduling and control. Spider saves time, reduces operator effort and increases repeat accuracy in automatic cutting flows.

Compatible with Caron's automatic cutting systems.

Description

- Fully automatic changeover between up to 6 rolls
- Integrated cradle for precise feeding to the cutting machine
- Powered by industrial PC and smart software

Technical Specification

Machine Specifications	
Capacity	up to 6 rolls
Maximum weight per roll	50 kg
Useful width	180/220 cm
Steering	right or left side
