

Product Sheet

LaserEvo Machine solution with conveyors

Category: Pico laser

Conveyor solution – Automated laser marking for maximum throughput

Our conveyor-based marking solution is designed to streamline production with automated feeding, marking and output. With two separate conveyor belts and a customised design, you get a system that can handle high volumes with minimal stoppages. An optimal solution for industrial marking where speed, precision and reliability are key.

- Automated operation
- High production capacity
- Tailor-made solution

Product description

Conveyor belt machine solution – Automated labelling with high capacity

Our machine solution with integrated conveyor belt is designed to maximise productivity and efficiency in your production. The operator only needs to load the items, then the machine handles the labelling and unloading completely automatically.

With two independent conveyor belts, production can be optimised for higher throughput and minimal downtime. We adapt and tailor the solution to your products and needs, making this system perfect for automated labelling in industrial environments.

Description

- Automated operation – the operator loads, and the machine handles labelling and unloading automatically.
- High production capacity – Two independent conveyor belts ensure fast and efficient handling.
- Tailor-made solution – Adapted to your products and production requirements.
- Increased efficiency – Minimal need for manual handling results in lower labour costs and higher precision.
- Perfect for industrial labelling – A stable, reliable and durable solution for high-volume production.
