LaserEvo Sign automation machine

Category: CO2 laser, Fiber MOPA, Green Laser, Pico laser, UV laser

Sign automation – Fully automatic marking for industrial signs in all volumes

Our sign automation machine delivers fast, accurate and durable marking on industrial signs – regardless of material, size or batch size. With the option of up to 4 sign magazines and full customisation to your production needs, you get an efficient and reliable solution for both small and large series. Perfect for industries where labelling must be permanent, traceable and clear.

- Automated and fast marking
- Durable and wear-resistant marking
- Customisable as needed

Product description

Sign automation machine – Efficient and accurate marking of industrial signs

Attaching an identification label with permanent marking is a crucial step in industry. Our label automation machine is a fully automatic, fast and precise solution that ensures that labels are clearly and durably marked – tailored to your requirements and production volumes.

Regardless of quantity, size or material, the machine can be tailored to handle both small series and high-volume production. We have the solution for running from one magazine or up to 4 different magazines with different signs, providing maximum flexibility and efficiency.

Description

- Automated and fast marking – Creates durable, high-quality markings on industrial signs.
- Durable and wear-resistant labelling – Ensures that information remains legible over time despite harsh environments.
- Customisable as needed – The machine is configured according to the number, size and material of the signs.
- Flexible integration – runs from one magazine or up to 4 different magazines with different signs
- Streamlined production – Automatic handling reduces the need for manual labour and increases throughput.
