VAPS camera system

Category: Textile printing accessories

VAPS Camera System – Perfect placement, every time!

The VAPS Camera System is an innovative placement tool that revolutionises accurate and efficient positioning in textile printing. By scanning a snapshot of the material directly onto the printing plate, you can position your design with absolute precision on the screen before printing. This is the ultimate solution for printing on challenging surfaces such as shoes, shirt pockets and other difficult-to-position products.

- Precise placement – A digital image of the print surface makes it easy to position the motif correctly.
- Reduced material waste – Fewer test prints save time and money.
- Perfect for difficult surfaces – Shoes, shirt pockets and special materials become easy to print on.

Product description

VAPS Camera System – Perfect placement, every time!

The VAPS Camera System is an innovative placement tool that revolutionises accurate and efficient positioning in textile printing. By scanning a snapshot of the material directly onto the printing plate, you can place your design with absolute precision on the screen before printing. This is the ultimate solution for printing on challenging surfaces such as shoes, shirt pockets and other difficult-to-place products.

VAPS software eliminates the need for test prints, saving time, materials and reducing production waste. It is fast, easy and extremely accurate, making it a must-have for all professional textile printers.

The 13-megapixel camera captures the entire print area from 7" x 8" up to 16" x 18" and is easily mounted 32 inches above the Brother GT-3 printer. The system works via USB 3.0 and Windows 7+, providing stable and fast image transfer.

Description

- Precise positioning – A digital image of the print area makes it easy to position the motif correctly.
- Reduced material waste – Fewer test prints save time and money.
- Perfect for difficult surfaces – Shoes, shirt pockets and special materials become easy to print on.
- High-resolution camera – 13 MP camera scans the print surface with maximum detail.
- Quick and easy integration – Easy to mount on the Brother GT-3 and connect via USB 3.0.

Technical Specification

Machine Specifications

Resolution	13 megapixels
Scanning area	7" x 8" up to 16" x 18"
Mounting height	32" (81 cm) above the printer
Compatibility	Brother GT-3 series
Connection	USB 3.0
Operating system	Windows 7
