

## Product Sheet

### Global LP 2881

#### Category: Industrial sewing machines

**Global LP 2881 series – high-speed postbed machines for maximum precision and efficiency.**

Electronic control, programmable feed, automatic functions and storage of up to 99 programmes make them ideal for professional production.

- Small or large spool
- Differential feed
- Automatic lubrication

## Product description

### Fully automatic high-performance post-bed machines for professional sewing

The Global LP 2881 series offers advanced high-speed flatbed machines for professional sewing. The machines are fully automatic with three stepper motors that drive the wheel feed, needle feed and presser foot, ensuring accurate and high-quality seams. With electronic stitch length adjustment, programmable differential feed and the ability to store up to 99 programmes via USB, you get full control and flexibility in production. Automatic functions such as thread trimming, presser foot lift and reverse stitching further increase efficiency. For extra capacity, there is also the LP 2881 LH AUT (C) model with a large gripper housing.

- Small or large bobbin – flexible thread management.
- Differential feed – guarantees even stitches on all materials.
- Automatic lubrication – reduces maintenance and extends service life
- Automatic finishes – perfect for professional seams.
- 99 memory locations – for quickly saving and recalling sewing settings.

## Technical Specification

| Machine Specifications      |                             |
|-----------------------------|-----------------------------|
| Automatic lubrication       | Yes                         |
| Integrated motor            | Yes                         |
| Maximum speed               | 2500 revolutions per minute |
| Maximum stitch length       | 5 mm                        |
| Automatic thread cutter     | Yes                         |
| Automatic presser foot lift | Yes                         |
| Automatic terminations      | Yes                         |
