

Product Sheet

Sewing machine stands, table tops and table parts

Category: Other solutions

Stands and table systems for industrial sewing machines

We offer robust stands and flexible table solutions that meet the high demands of today's production. The standard is the proven Z-stand, but for better ergonomics there are height-adjustable options. Our tables are based on the VARIFORM concept with modular worktops that can be adapted as needed. The most common worktop is SYB1 in the K-100 system, which can easily be supplemented with flaps and additional parts to create an optimal workstation – whether for heavy sewing, specialised machines or ergonomic work environments.

- Robust Z-frame as standard
- Height-adjustable stand as an option for better ergonomics
- VARIFORM – buildable table tops for a flexible working environment

Product description

Stands, table tops and table parts for industrial sewing machines

We offer a complete range of stands and table solutions for industrial sewing machines – designed to meet the high demands of today's production. Our standard stand is the robust and proven Z-stand, but we also offer height-adjustable stands that provide a more ergonomic working environment and better adaptation to different operators and work tasks.

The table system is based on our VARIFORM concept, which means that the table tops are modular and flexible. The most common tabletop is SYB1, which is included in our K-100 table. It can be easily adapted with different types of flaps and add-ons, making it possible to configure a work table that is optimal for your particular business – whether it involves heavy sewing, specially adapted machines or ergonomic placement.

Description

- Robust Z-stand as standard
- Optional height-adjustable stand for better ergonomics
- VARIFORM – buildable table tops for a flexible working environment
- SYB1 – our most popular tabletop in the K-100 system
- Option to mount flaps and additional parts as needed
