Category: Embroidery thread

Madeira Classic – Premium viscose thread with a natural sheen and vibrant colours

Do you want to create embroidery with a soft feel, an exclusive sheen and a high level of detail? Then Madeira Classic is the obvious choice.

- Natural, silk-like lustre for exquisite embroidery
- Soft and supple thread that feels comfortable against the skin
- Perfect for fashion, corporate wear, sportswear, home furnishings and accessories

Product description

The viscose thread that brings embroidery to life

Madeira Classic is a premium embroidery thread made from rayon viscose and is one of the world's most popular choices for professional machine embroidery. The thread is renowned for its vivid colours, natural lustre and its ability to give embroidery a vibrant and exclusive look. Unlike polyester, Classic has a softer sheen that lends depth and elegance to logos, text and decorative motifs. The result is embroidery that feels more exclusive and supple.

For embroidery where appearance is crucial

Classic is a popular choice when the design requires strong colour reproduction, a high level of detail and a soft finish. The thread is particularly well suited to:

- Fashion and premium clothing
- Corporate and promotional clothing
- Sports and leisurewear
- Baby and children's clothing
- Towels and terry cloth
- Denim, bags and accessories
- Home textiles

High quality for professional production

Madeira Classic has been developed for industrial embroidery and produces even stitches even at high machine speeds. The thread is available in several thicknesses to suit everything from small details and monograms to larger decorative embroidery with high coverage. With its wide range of colours, natural lustre and proven quality, Madeira Classic is the obvious choice for anyone wishing to create embroidery with an exclusive and professional finish. Classic embroidery thread is available in size 40 on 1,000 m and 5,000 m spools, in size 30 on 3,000 m spools, and in size 60 on 1,500 m and 5,000 m spools.
