Madeira CR Metallic

Category: Embroidery thread

Madeira CR Metallic – The metallic thread that combines lustre, durability and ease of embroidery

Do you want to create exclusive embroidery designs with a metallic effect without compromising on productivity? Then Madeira CR Metallic is the perfect choice.

- High lustre and an exclusive metallic finish
- Developed for trouble-free embroidery on industrial machines
- Consistent performance even at high embroidery speeds

Product description

Next-generation metallic thread

Madeira CR Metallic is an innovative metallic thread developed to make metallic embroidery easier, quicker and more accessible. Unlike many traditional metallic threads, which often require extensive machine adjustments and can cause thread breaks, CR Metallic is designed to ensure stable and trouble-free production. Its advanced design combines an intense metallic lustre with high durability and excellent machine performance, making the thread the obvious choice for professional embroidery production.

Metallic embroidery without compromise

CR Metallic is designed to perform smoothly even at high machine speeds of between 700 and 1,000 stitches per minute. The thread delivers consistent results with fewer breaks and less downtime, contributing to more efficient production. At the same time, the metallic finish creates an exclusive effect that highlights details, contours and decorative elements in a way that traditional embroidery threads cannot.

Perfect for:

- Logos and brand identity
- Fashion and premium collections
- Sportswear and promotional clothing
- Leather and accessories
- Decorative details
- Monograms and outlines
- Emblems and badges
- Exclusive embroidered appliqués

High quality for professional production

CR Metallic has been developed for industrial embroidery machines and offers a combination of high lustre, durability and ease of use. The thread is an excellent choice for businesses wishing to create high-quality metallic effects whilst maintaining efficient production. CR Metallic is available in 40-count on 2,500-metre bobbins and 20-count on 2,000-metre bobbins.
